

LASER
TATTOO REMOVAL

JUST FACTS

AW3® ND Yag Tattoo Removal System is used to treat tattoo removal and a wide range of skin conditions.

Allwhite Laser is internationally recognised as a leading provider of Laser systems from IPL to Laser Lipo and many more. The ND Yag Laser Tattoo Removal System is clinically proven to be safe and effective for tattoos and pigmentation removal.

With a wide variety of medically certified machines, AW3® represents a recognised system within the laser industry.

HOW DOES IT WORK?

Laser emitted by the system has a strong penetration ability which allows the correct light source to reach deep into the dermis layer. The pigment particles absorb the light energy and explode rapidly, bursting into tiny pieces, thus diminishing the colour density to get rid of it. The system can effectively remove mutated pigmentations and vascular tissue based on the undamaged ambient tissue. This process is called "Selective Heat Absorption".

The AW3® Tattoo Removal System is one of the most effective systems available in the world. With minimal pain and instantaneous blasting technology. On average 4-7 treatments are required to remove tattoos or pigmentation, leaving you with great looking skin.

Prices start from £45
